Packing, Quality & Maritime Export Compliance

PACKING & DISTRIBUTION

Use ventilated mesh or suitable woven bags for bulbs and tubers. Use reinforced ventilated corrugated master cartons for fruit. Confirm net pack weight, closures, markings and pallet configuration before packing. Match pack strength and vent alignment to the load pattern. Figures marked Proposed are planning targets pending Shopovia approval. Confirm final net payload and booking limits before quotation.

MARITIME HANDLING

Postharvest references: mandarins 5–8°C, mature-green mangoes 13°C, partially ripe mangoes 10°C (UC Davis). Mango fresh-air exchange guidance: 25–40 m³/h (CMA CGM). Agree the loading pulp range, reefer setpoint, ventilation and logger positions for each booking. Review mixed loads for temperature, humidity, ventilation, ethylene and odour compatibility.

CONTRACT LOT RELEASE

Define the lot, random sampling plan, measurement basis and acceptance limits before procurement. Check size, count and defects. Where specified, record °Brix, titratable acidity, juice recovery, SHU or residual soil as a percentage of net sample weight. Record sample identifiers, inspection results and the release decision against the lot.

PRE-SHIPMENT VERIFICATION

SGS or Bureau Veritas verification at Karachi Port is a mandatory contract release condition. Release follows acceptance of the inspection findings and validation of the applicable Shipping and Lot Dossier.

Shipping and Lot Dossier Inspection report, lot Certificate of Analysis (COA), traceability records, commercial invoice, packing list, Certificate of Origin and applicable phytosanitary certificates. Track issuer, document reference and acceptance status. Add the ocean Bill of Lading after carrier issuance.
